VIVADO
HLx Editions
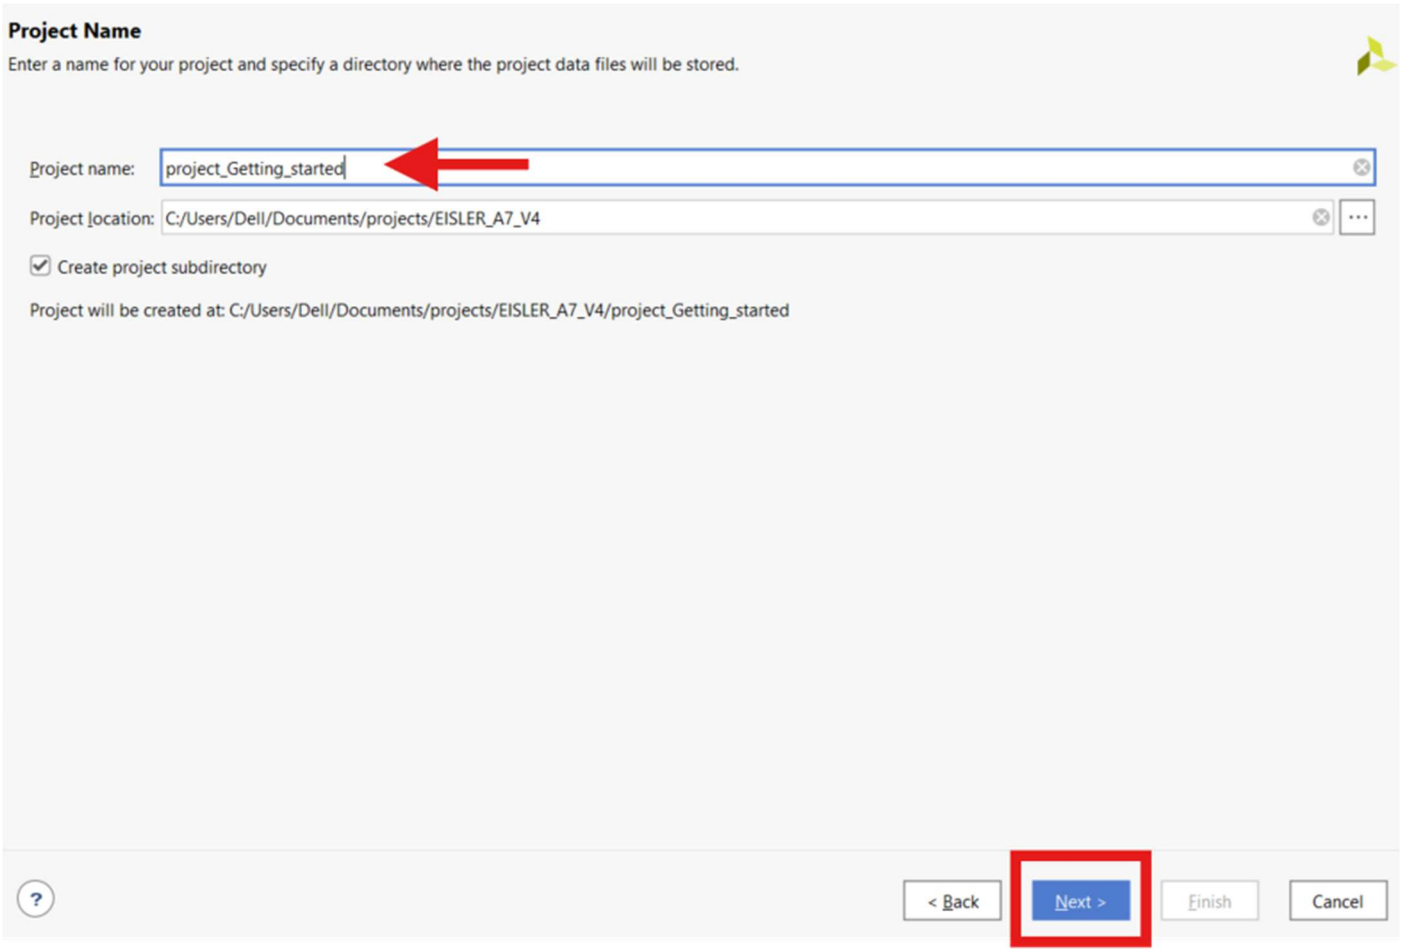
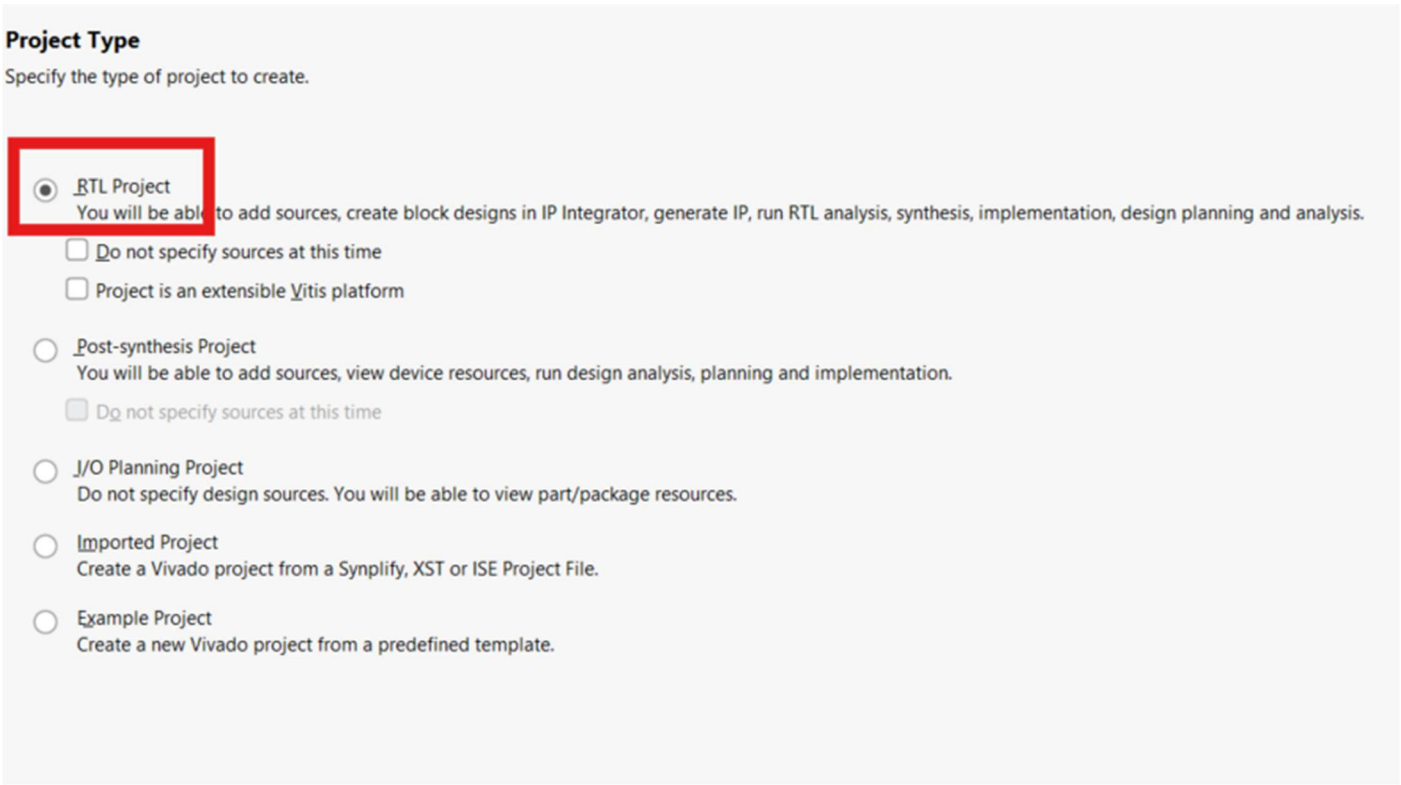
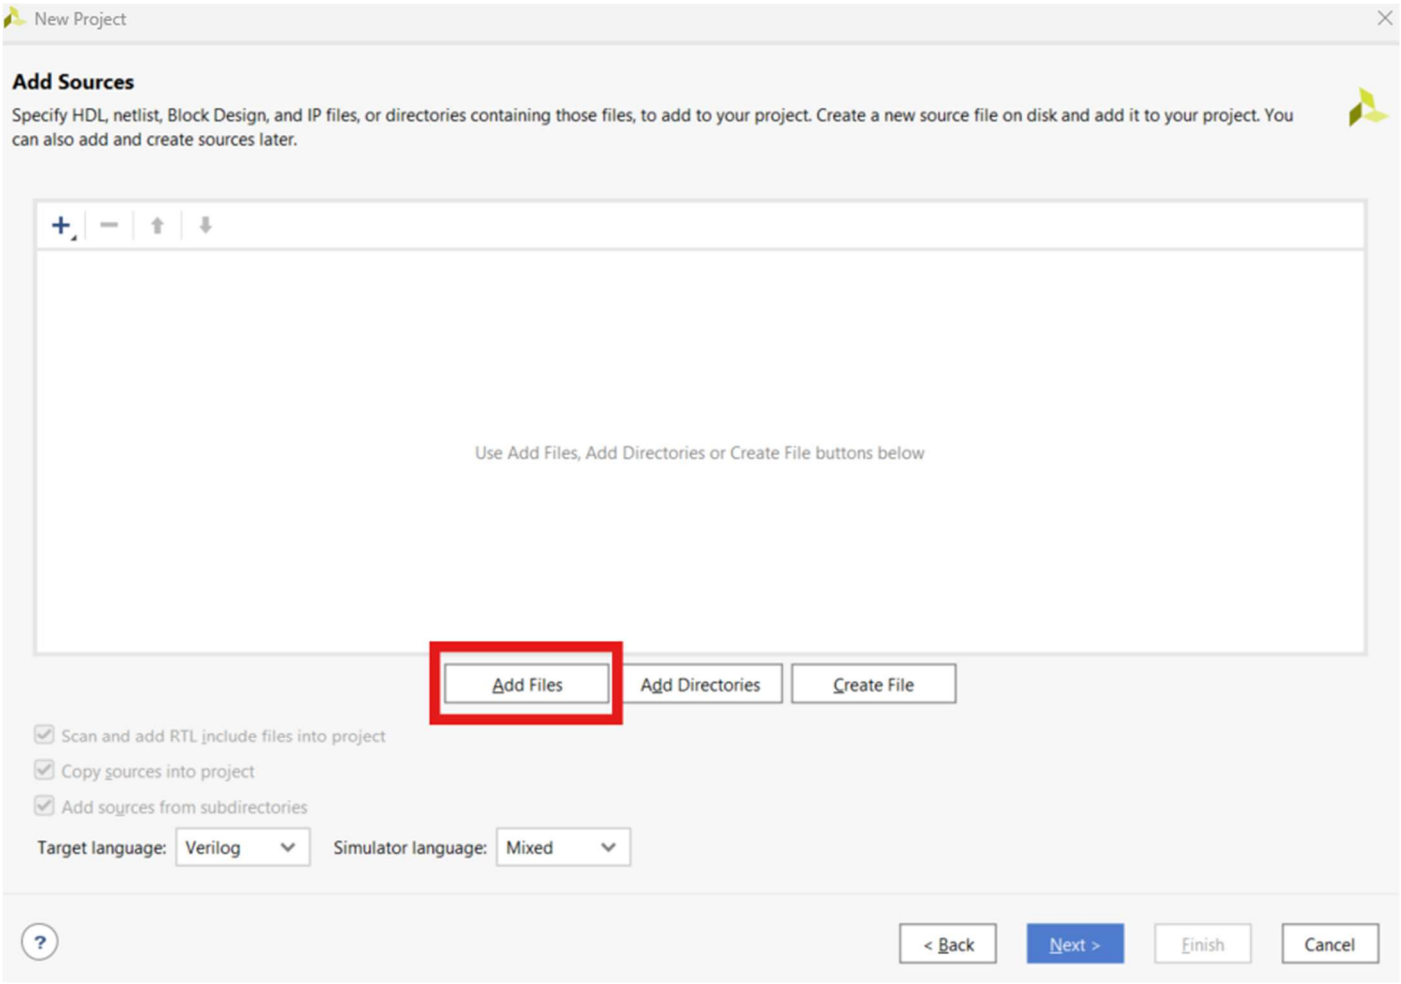
Create a New Vivado Project
This wizard will guide you through the creation of a new project.
To create a Vivado project you will need to provide a name and a location for your project files. Next, you will specify the type of flow you'll be working with. Finally, you will specify your project sources and choose a default part.
XILINX
?
< Back
Next >
Finish
Cancel



Project Name
Enter a name for your project and specify a directory where the project data files will be stored.
Project name: project_Getting_started
Project location: C:/Users/Dell/Documents/projects/EISLER_A7_V4
Create project subdirectory
Project will be created at: C:/Users/Dell/Documents/projects/EISLER_A7_V4/project_Getting_started
?
< Back
Next >
Finish
Cancel



Project Type
Specify the type of project to create.
RTL Project
You will be able to add sources, create block designs in IP Integrator, generate IP, run RTL analysis, synthesis, implementation, design planning and analysis.
Do not specify sources at this time
Project is an extensible Vitis platform
Post-synthesis Project
You will be able to add sources, view device resources, run design analysis, planning and implementation.
Do not specify sources at this time
I/O Planning Project
Do not specify design sources. You will be able to view part/package resources.
Imported Project
Create a Vivado project from a Synplify, XST or ISE Project File.
Example Project
Create a new Vivado project from a predefined template.



New Project
Add Sources
Specify HDL, netlist, Block Design, and IP files, or directories containing those files, to add to your project. Create a new source file on disk and add it to your project. You can also add and create sources later.
Use Add Files, Add Directories or Create File buttons below
Add Files
Add Directories
Create File
Scan and add RTL include files into project
Copy sources into project
Add sources from subdirectories
Target language: Verilog
Simulator language: Mixed

New Project Summary
A new RTL project named 'project_Getting_started' will be created.
2 source files will be added.
1 constraints file will be added.
The default part and product family for the new project:
Default Part: xc7a35tcsg324-1
Product: Artix-7
Family: Artix-7
Package: csg324
Speed Grade: -1
